

## **Client Testing Feedback**

### **Person 1**

- Uses Fitbit already and is a big fan of how the dashboard shows all the data coming from it
- Likes how only one exercise is shown at a time once the workout has been started, helps to not mix up what is next

### **Person 2**

- Uses WhatsApp so agrees there is no need for messaging within the application
- Does not feel there is a need for customisability on the dashboard, feels the screen should be prebuilt

### **Person 3**

- Big fan of how the trainer can see their progress
- Would not be sure as to what to tell their trainer when it comes to a weekly check in

### **Person 4**

- Would enjoy having all of their workout, fitness and wellness data within the one application

### **Person 5**

- Fan of the feedback going straight to trainer
- Doesn't have a smart watch and so unsure if they can still use the app.

### **Person 6**

- Upcoming workout is a very good widget, don't have to change page to see what's next
- Does not see the need for widgets such as sleep or heart rate
